Client authenticity based printing management apparatus for printer connected to network — performs printing on paper, only when password entered by client matches with password stored in memory

FUJI XEROX CO LTD 1997.11.12 1997JP-310325

P84 Q36 (1999.05.28) G06F 3/12, B41J 29/00, B65H 3/44, G03G 21/00

NOVELTY - The password entered by client is compared with the password stored in memory. If the password entered is different from the password stored, the ability to use the designated paper feed tray is prevented and if the password entered is same with password stored, the printing controller performs printing of paper accommodated in paper feed tray.

Use: For managing printing operation in printer connected to network.

Advantage: Prevents usage of paper feed tray by unauthorized client, as it performs printing on paper only after password entered by client has been verified. (24pp Dwg.No.1/11)
